Professional Summary

Data Scientist with over 5 years of experience in programming applied to data, machine learning, natural language processing (NLP), and data analysis.

Experience developing solutions for real-world business problems, including credit scoring, sales forecasting, customer segmentation, behavioral analysis, anomaly detection, delivery delay prediction, and structured and unstructured data processing.

Practical knowledge of Python, SQL, pandas, scikit-learn, spaCy, FAISS, OCR, Tesseract, regular expressions, and document processing, as well as data pipeline development, process automation, feature engineering, predictive modeling, and artificial intelligence applications, including solutions based on embeddings, RAG, and LLMs.

Professional Experience

Data Scientist – Vert Analytics

October 2024 – Present

- Develop data analysis and machine learning solutions to generate strategic insights.
- Developed a legal defense recommendation system using NLP techniques, embeddings, and FAISS.
- Implemented data extraction and processing pipelines for PDF documents, including scanned documents.
- Used OCR with Tesseract, regular expressions, and pdfplumber to extract and structure information.
- Developed text processing pipelines for social media comment analysis using spaCy.
- Applied tokenization, lemmatization, stopword removal, and grammar correction techniques.
- Analyzed patterns and anomalies in time series.
- Developed interactive SAS dashboards to present analyses and results.

Data Scientist – Datarisk

January 2022 – August 2024

- Developed credit scoring models to support credit approval decisions and risk assessment.
- Developed sales forecasting models using regression techniques, including preprocessing, feature engineering, and hyperparameter optimization.
- Performed customer segmentation using clustering algorithms to identify behavioral patterns among customers in the database.
- Developed predictive models for behavioral analysis, including churn propensity, credit risk, and employment instability.

- Applied machine learning techniques to solve business problems related to risk, customer behavior, and commercial planning.

Data Scientist – Be.X!

March 2021 – January 2022

- Extracted, cleaned, and structured unstructured data using regular expressions and text processing techniques.
- Developed business-rule-based anomaly detection solutions.
- Developed predictive models to estimate the probability of delivery delays.
- Applied ranking-based metrics to prioritize deliveries with a higher risk of delay.

Education

Master's Degree in Natural Sciences – Environmental Sciences

State University of Northern Rio de Janeiro (UENF)

2017 – 2019

Bachelor's Degree in Physics Education

Instituto Federal Fluminense (IFF)

2010 – 2016

Technical Skills

Programming Languages: Python and SQL

Machine Learning: Regression, classification, clustering, predictive modeling, and time series analysis

Natural Language Processing: Tokenization, lemmatization, embeddings, text analysis, summarization, and natural language processing

LLMs and Artificial Intelligence: RAG, embeddings, FAISS, Ollama, and LLM applications

Languages

Portuguese: Native

English: Full Professional Proficiency
